

Maintenance Dashboards

Providing real-time operational intelligence

“You can’t control what you can’t measure.” Peter Drucker, Management Guru.

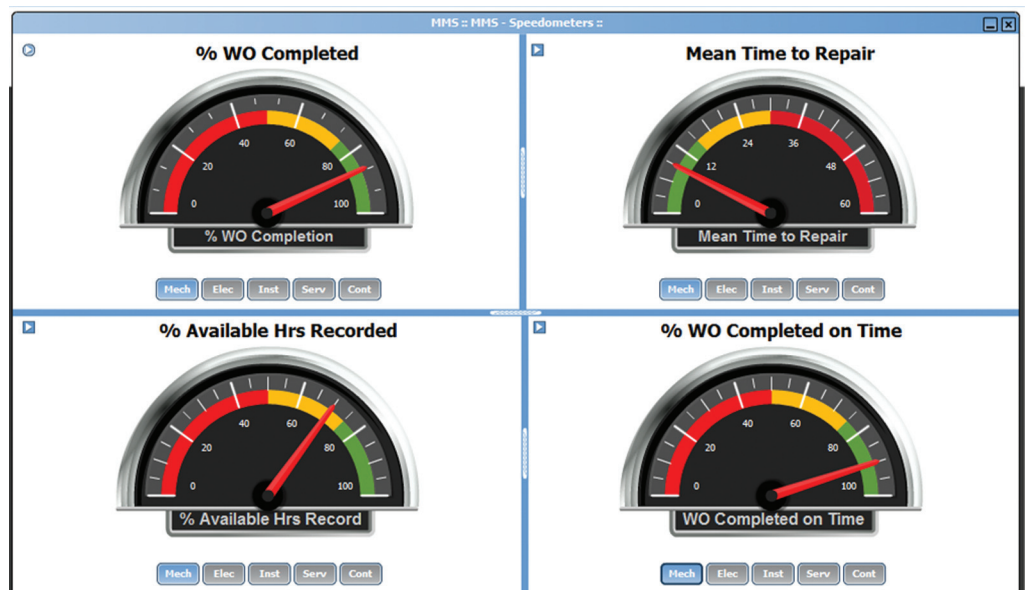

BY CLEARLY AND CONTINUOUSLY INDICATING PERFORMANCE against key metrics dashboards enable plant and maintenance managers to take greater control of the daily management of plant assets. Idhammar's Maintenance Dashboard software has been specifically designed to deliver real-time maintenance intelligence to allow decision makers to proactively track, monitor and respond.

Continuous monitoring of plant assets

The continuous monitoring of plant assets increases responsiveness by reducing errors and delays.

Real-time updates

Dynamic operational data accessed by the Dashboard module is automatically refreshed at user-defined intervals to provide real-time information.

Multi-level Alerts

As the Dashboard automatically refreshes content it checks to see if any alert condition has been met. If an exception arises, an alert is triggered which can be communicated privately, publicly or to a user defined group of people via email. Each alert can be scheduled to notify different levels of management as appropriate to the severity.

Plasma screen output option

The option to display the Dashboard on a plasma screen provides greater visibility across larger maintenance team or across the wider organisation. This can have a beneficial effect on team-work and support cross-functional communication.

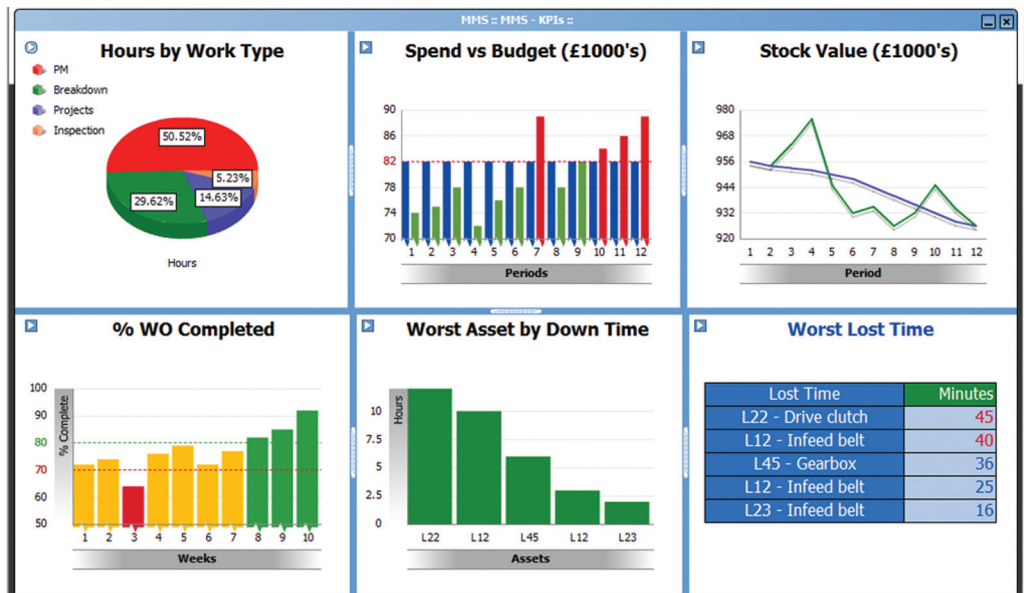

Flexible reporting customised by operational user

User specific content

The Idhammar Maintenance Dashboards can be easily configured to show the data that is important to your company and your employees. The Dashboards can be customised and personalised to show the performance against metric (KPI), for a specific role and job-holder.

Drill down capability

Users are able to create and modify metrics, drill-down to a desired level of detail, and set alert thresholds or assign tasks to themselves without requiring IT support to do so.

Benefits to the bottom-line

Idhammar's Maintenance Dashboards provide a platform for organizations to:

- Increase efficiency by quickly identifying and responding to exceptions
- Empower staff, ensuring job-holders are clear on their performance against metric
- Support continuous improvement by highlighting areas for improvement

Idhammar's Maintenance Dashboards are available as an add-on module to both Idhammar Maintenance Systems customers, and users of third party incumbent CMMS.
