

Idhammar REPORTS - browser based, real-time reporting

Benefits

- Easy to use, web based reporting module
- Schedule and email reports directly to stakeholders
- Continually refresh reports to provide real-time reporting
- Customisable reports that meet your requirements
- Improves visibility of maintenance & asset performance to all stakeholders
- Configurable secure access

Idhammar REPORTS delivers visually attractive, accurate and easy to understand real-time reporting on asset performance. The reporting suite allows maintenance managers and other stakeholders to identify trends and operational issues as they arise.

With extensive, drill down reporting capabilities along with easy to interpret graphical interfaces, the reporting suite allows users from factory floor to boardroom to achieve greater control and deliver informed decisions.

Why use Idhammar’s browser based reporting module?

Accurately measuring performance and automating reporting

Deploying Idhammar REPORTS will ensure that your data isn’t lost in a black hole, but will be used to inform and actively improve all aspects of asset management, stock control and procurement. Technicians, materials controllers and other stakeholders can quickly and easily schedule reports to run automatically. Information generated can be used to build a solid business case for investment and highlight trends caused by rogue equipment, contractors or materials suppliers. Each report can be communicated to individual users, to notification groups or to display screens - saving time and increasing efficiency.

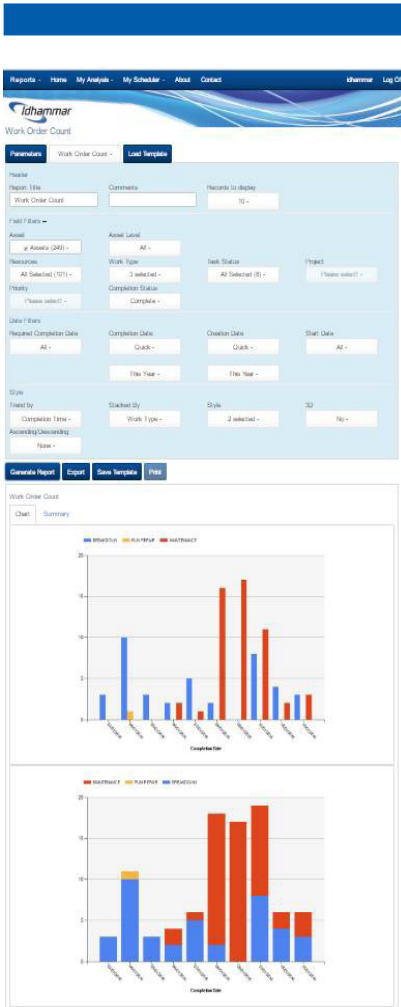

Essential operating information

Idhammar REPORTS presents information derived from data in the most significant operational areas of the Idhammar suite of applications: Work Management, Stock Control, Procurement, Asset Management and Project Management. Statistical and financial performance data can be presented in all popular formats including: column, pie, line and stacked column charts, tabular grids, forms and text blocks.

Time Periods and Run Schedules

Idhammar REPORTS allows information to be presented relating to the time period of your choice. Time period can be any of...

- **Normal:** specify the start and end date
- **Quick:** options include today, yesterday, this and last week, this and last month, this and last year

Disclaimer: Screen designs and system functionality are subject to change without notice.

- **Offset:** select a number of hours, days, weeks, periods or years past or future from the scheduled run date
- **Weeks:** specify the start and end weeks

Any Idhammar REPORT can be saved as a template and automatically distributed to individuals or notification groups periodically, or on demand.

Multi-dimensional configuration

Data can be selected on the basis of all key system elements, including assets, work orders, projects, resources, stock items, suppliers and their associated reference data.

The range of reports is immense. A typical daily report bundle, delivered automatically might include:

- Most costly work orders in the last 30 hours in Pareto Columns by Asset
- Top Ten Assets for downtime this week in Pareto stacked column by Work Type and Asset
- A list of the most expensive stock withdrawals in the last 24 hours
- A list of all Work Orders on hold, awaiting parts

... whereas a monthly report bundle might include:

- Stock valuation
- Suppliers with the greatest number or value of purchase orders this year
- Worst Assets by Cost, downtime or number of work orders
- MTTR or MTBF
- Total downtime trend

Configurable and secure access

Access to Idhammar REPORTS is easily granted or restricted within the Idhammar security management suite. Individual access to information can be restricted by a range of factors including asset list, skill level and functional responsibilities.

Hardware

Idhammar REPORTS can be delivered via a range of hardware and display devices including smart phones, tablets (including iPads), laptop / desktop PC's, Andon devices and networked TV screens.

Dedicated implementation, training and support.

With more than thirty years in delivering high spec application software to manufacturers and facilities managers, Idhammar has gained a solid understanding of the needs of maintenance professionals. Our experienced implementers will provide assistance and guidance in the configuration of Idhammar REPORTS to enable all stakeholders to maximise their understanding of all significant operational issues and trends in a timely and informative manner.
