OEE Dashboards - Providing real-time operational intelligence

BY CLEARLY AND CONTINUOUSLY INDICATING PERFORMANCE against key metrics dashboards enable manufacturing managers to take greater control of the daily management of plant assets. Idhammar's OEE Dashboard software delivers real-time intelligence on the overall equipment effectiveness of a plant, allowing decision makers to proactively track, monitor and respond to operational issues.
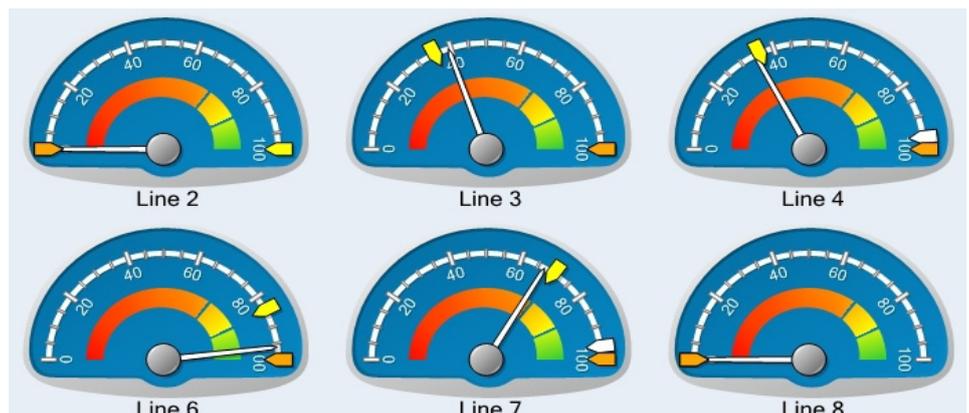

Continuous monitoring of plant assets

The continuous monitoring of plant assets and reporting of OEE scores provides the basis for improvement and operational efficiency.

Real-time updates

Dynamic operational data accessed by the Dashboard module is automatically refreshed at user-defined intervals to provide real-time information.

Multi-level Alerts

As the Dashboard automatically refreshes content it checks to see if any alert condition has been met. If an exception arises, an alert is triggered which can be communicated privately, publicly or to a user defined group of people via email. Each alert can be scheduled to notify different levels of management as appropriate to the severity of the incident.

IDHAMMAR SYSTEMS – keeping industry moving and improving

Plasma screen output option

The option to display the Dashboard on a plasma screen provides greater visibility across the wider organisation. This has a proven beneficial effect on team-work and support cross-functional communication.

Flexible reporting customised by operational user

User specific content

The Idhammar OEE Dashboards can be easily configured to show the data that is important to your company and your employees. The Dashboards can be customised and personalised to show the performance against metric (KPI), for a specific role and job-holder.
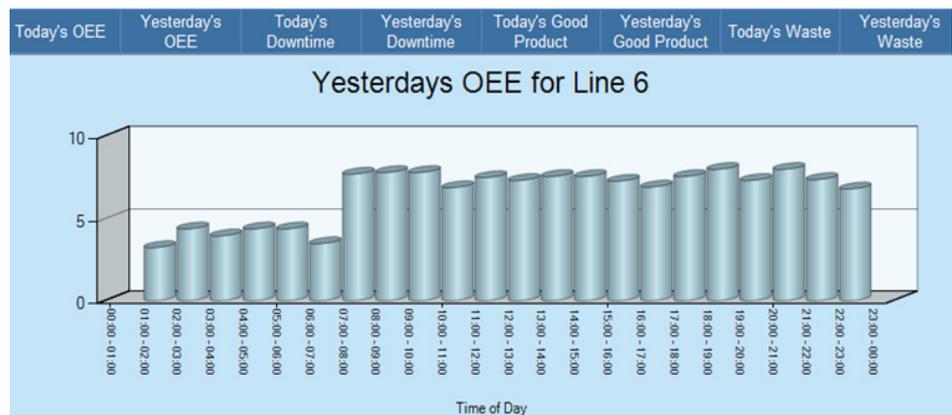

Drill down capability

Users are able to create and modify metrics, drill-down to a desired level of detail, and set alert thresholds or assign tasks to themselves without requiring IT support to do so.

Benefits to the bottom-line

Idhammar's OEE Dashboards provide a platform for organisations to:

- Increase efficiency by quickly identifying and responding to exceptions

- Empower staff, ensuring job-holders are clear on their performance against metric

- Support continuous improvement
